Ms. Chafe,

Thank you for your input on the proposed Atlantic Coast Pipeline. Though delayed, I wanted to let you know I did receive your email and that we are taking your comments into consideration. You may already know this, but the N.C. Department of Environmental Quality has a webpage dedicated to the ACP, which includes updates on the various state permits under consideration. For example, last week DEQ updated the audio file of the November 15th public hearing on the air quality permit application for the Northampton County Compressor Station.

Subject: ACP

Good Morning, Jeremy,

As a resident of North Carolina I feel very strongly that we do not want nor do we need this pipeline. We should be using our funds to support the development of alternative sources of energy such as wind, solar and water power, and possibly geothermal power if the opportunity exists in our state.

We cannot afford to pollute our precious air and water with methane gas and the poisons that will seep into the groundwater from leaks from this pipeline, and the disruptive process of building it. The health impacts of this pollution will be enormous, and the environmental effects on climate change will be terrible, especially on our vulnerable coast. All of this has huge economic implications for our good state.

Please do not grant the 401 permit, and do not allow FERC to rush into approving of this decision.

Thank you,
Lorna Chafe
